

Material Separator

for separating materials with
pneumatic conveyor systems

Schuko Separators

Separators separate the extracted material of different machines from the air flow and deliver it compactors or balers.

The dust-laden air flow continues its path in the filter. There, the dust is separated and purified air is feed to the production rooms.

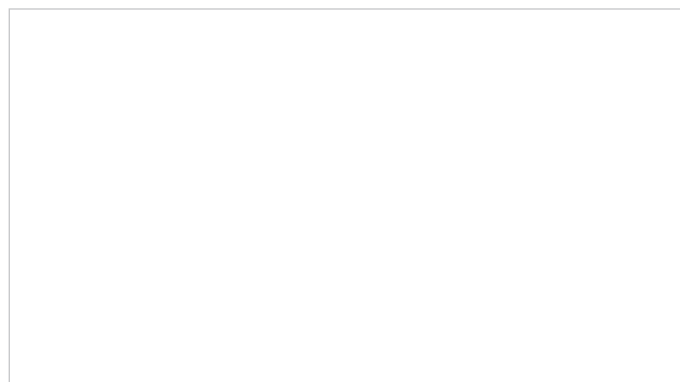

This saves energy and ensures a clean climate in work rooms.

Benefits:

- ✓ seven unit sizes for optimal dimensioning of the use case
- ✓ reliable and continuous operation
- ✓ low power requirement
- ✓ high air flow and material flow rate
- ✓ low noise level
- ✓ the perforated shell is made of steel and is therefore highly wear-resistant
- ✓ less static electricity, which prevents caking of material
- ✓ a safety package provides easy safe access for inspections
- ✓ reliable and continuous operation

**Efficient pre-separation
for trouble-free plant operation**
